BRIGHTSIDE ELECTRIC

Five ways to lower your shop's energy bill this winter

A guide from Brightside Electric

1. **Switch to LED bulbs.**
   LEDs use at least 75% less energy than incandescent bulbs and last far longer.

2. **Set a schedule on your thermostat.**
   Turn the heat down when the shop is closed instead of heating an empty room overnight.

3. **Seal the drafts.**
   Weatherstrip doors and windows; gaps around a back door can let heat out all day.

4. **Book a heating tune-up.**
   A system that's cleaned and checked before winter runs more efficiently.

5. **Turn equipment off at night.**
   Monitors, printers and display screens still draw power on standby.
